AB InBev purchase a temporary building for brewery's loading bay redevelopment

AB InBev is one of the world's leading brewers, with sites based across the globe, including the UK. Established in Belgium, AB InBev brew over 500 lager brands and is well known for Budweiser, Corona and Stella Artois. Their site was undergoing a loading bay expansion when they required an additional storage facility. Working closely with contractors, they contacted Aganto to provide a robust solution.

Solution:

Following a site visit from Aganto Sales Director, David Duxbury, AB InBev purchased a part-insulated temporary warehouse. As the brewery was in use and under construction, Aganto worked with the client and contractors to successfully coordinate the installation. This required a much longer installation process and different use of plant equipment due to restricted site access.

Taking twelve weeks from the point of order, a 30m x 85m x 6.2m temporary building was erected with a rapid action roller shutter door and ten pedestrian access doors to accommodate the large building. To protect the temporary structure against weather damage PVC gables and gutters were installed. Inside the warehouse, Aganto supplied an electrical and lighting fit-out.

With the new temporary warehouse structure, AB InBev has increased the pallet storage capacity of its products. Additionally, it has improved the brewery's operations and enabled a smooth process for their goods in and out.

Features

- Lighting
- Pedestrian Access Doors
- Roller Shutter Doors
