Want to reduce off-site storage costs?

Bott Group use Aganto building to reduce off-site storage costs

Bott Group manufacture a vast range of workshop systems, van racking and tool storage equipment alongside complementary services. The Group operate globally with multiple production facilities located across the UK. Bott Group wanted to increase warehouse storage and workshop space at their Ashby de la Zouch site to reduce off-site storage and transport costs.

Solution:

As a previous client with multiple temporary buildings situated across numerous sites, they contacted Aganto to provide an efficient and economical solution.

After a site visit, Aganto advised a fully insulated 20m x 30m x 5.2m temporary structure. The temporary building met their desired 60/40 divide within the building to accommodate warehousing storage and floor space for a vehicle workshop.

Aganto installed the temporary building in under two weeks saving Bott Group from the financial commitment of leasing off-site storage. With the temporary structure, Bott Group has successfully increased the volume of stock with on-site storage and maximised its service offerings.

The Aganto temporary building has helped Bott Group to effectively establish a model to achieve the long-term goal of reducing transportation costs of components.

Features

- **Pedestrian Access Doors**
- **Electric Roller Shutter Doors**

"Aganto has provided us with good service for several years now, and we have a good relationship with them. I would certainly recommend their temporary buildings to anyone looking at flexible building options. I have every intention of continuing to use Aganto in the future."

Graham Wright, UK Purchasing Manager, Bott Group
