Glamping Fires expand their manufacturing process with Aganto temporary workshop

Glamping Fires are a supplier of high-quality glamping equipment based in Ammanford. This includes manufacturing glamping pods as well as supplying and installing wood burning stoves, wood fired hot tubs and fire pits. When they decided it was time to expand their manufacturing process they came to Aganto for a temporary solution.

Solution:

The business was looking for additional space in order to increase the number of glamping pods being manufactured on their site, allowing them to meet a growing demand for their products. They required rental of a new temporary workshop to provide additional space in a short period of time without the commitment of building a permanent structure.

Within just 6 weeks Aganto was able to supply them with a 15m x 20m x 6.2m insulated temporary workshop. This effortlessly increased their onsite capacity, allowing them to expand their manufacturing capabilities without incurring excessive costs or making long-term commitments.

Additionally, the structure makes the manufacturing process significantly easier by protecting both employees and structures from the Welsh elements! All our temporary structures are built using robust industrial strength aluminium frames they are capable of withstanding snow and wind loadings to BSEN1991 standards.

Features

- Insulated
- Roller Shutter Doors
