DIAGRAM

FACTS

You can replace a 400W Metal Halide model and enjoy savings of up to 65%, while maintenance costs are also markedly reduced thanks to a high thermal efficiency aluminium heatsink that leads to a low operating temperature and greater heat dissipation - giving this unit an impressive 50,000hr lifespan. There are multiple add-ons available to choose from for a truly tailored lighting solution. For example, you can increase energy savings with microwave or daylight sensors, which operate the luminaire when motion or a lack of daylight is detected. Furthermore, the additional adjustable installation bracket allows for a more flexible approach to installation – particularly in challenging areas and locations.

OPTIONAL ADD-ONS

Daylight Sensor

Motion Sensor

Daylight + Motion Sensor
